VISHAL GASTU

Chennai, Tamil Nadu | 9150184320 | vishalgastu30@gmail.com | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Computer Science undergraduate at SRM Institute of Science and Technology (2024–2028) with hands-on experience across the full software development life cycle — from requirements and architecture to building, testing, and shipping production-oriented web and backend systems. Experienced in frontend development (React, Next.js), backend development (Go, Node.js, REST APIs), database management (PostgreSQL, SQL optimization, indexing), and software testing and debugging of production workflows. Comfortable scoping features and translating user needs into shipped product, with additional grounding in computer architecture, operating systems, and applied AI/ML research.

SKILLS

- **Web & Frontend Development:** React, Next.js, JavaScript, TypeScript, HTML, CSS, responsive UI design
- **Backend Development:** Go, Node.js, Express.js, REST API design, layered Handler–Service–Repository architecture
- **Database Management (DBMS):** PostgreSQL, MySQL, SQL optimization, indexing, joins, aggregations, parameterized queries, schema design
- **Software Testing & Debugging:** Manual and workflow-level testing, API validation, production debugging, data-integrity verification across pipelines
- **Software Development Life Cycle (SDLC):** Requirements → design → implementation → testing → deployment, applied across internship and personal projects
- **Computer Architecture & CS Fundamentals:** Data Structures & Algorithms, OOP, Operating Systems, Computer Networks, Computer Architecture
- **Product Thinking:** Feature scoping, role-based access design, prioritization across multi-stakeholder platforms
- **Tools:** Git, GitHub, PyTorch, HuggingFace, On-device LLMs

EXPERIENCE

Full Stack Engineer Intern — Qube Cinema Technologies *Jul 2026 – Aug 2026*

Chennai, Tamil Nadu · Remote

- Developed Go-based REST APIs and PostgreSQL reporting workflows with JWT authentication, covering the full SDLC from design through testing to deployment.
- Built dynamic filtering, search, sorting, pagination, and summary analytics for large datasets, including manual testing and validation of edge cases before release.
- Applied SQL optimization, database indexing, complex joins, aggregations, and parameterized queries to improve data access and backend performance.
- Followed a layered Handler–Service–Repository architecture (backend development) and integrated Release and Mapped CPL reporting modules with a React/Next.js frontend (web & frontend development).
- Worked in a production-oriented workflow involving debugging, software testing, Git, API design, and performance optimization.

PROJECTS

Synergy — Campus Intelligence & Placement OS

Next.js, React, TypeScript, Tailwind CSS, Node.js, REST API

- Built a full-stack, role-based campus platform connecting Students, Faculty, Management, and Recruiters through verified skill tracking and placement analytics — scoping features product-management-style across four distinct user roles.
- Designed faculty-verification workflows, cohort analytics dashboards, and recruiter talent-discovery pipelines with real-time readiness scoring.
- Implemented five role-specific portals with a shared design system and a staged REST API integration layer, testing each portal's workflow end-to-end before integration.

Viren — Privacy-First Investment Intelligence

Flutter, Dart, Python, SQLite, Drift ORM, On-device LLM

- Built an offline-capable application that reconstructs stock portfolios from broker emails and encrypted PDFs, with Gmail OAuth, PDF decryption, trade extraction, and reconciliation logic tested against real broker data for accuracy and data integrity.

CRAFT — Adaptive Fine-Tuning for Small Language Models

PyTorch, HuggingFace, TRL, GRPO, QLoRA

- Built a four-phase reinforcement-learning framework with deterministic execution verification and adaptive curriculum learning, deploying the final model as a 4-bit GGUF (~2.2 GB) artifact for CPU execution.

RESEARCH PUBLICATION

Automated Liver Fibrosis Staging Using a Transformer-based Weighted Soft Voting Ensemble

2026 International Conference on Natural Language Processing and Computer Vision (ICNPCV) · Global Academy of Technology, Bengaluru · Presented July 17–18, 2026

- Research work on a transformer-based medical AI approach using a weighted soft-voting ensemble for automated liver fibrosis staging.

EDUCATION

- SRM Institute of Science and Technology, Kattankulathur, Tamil Nadu | 2024–2028 — B.Tech CSE, CGPA: 8.53/10.0
- Class XII — Chettinad Vidyashram, State Board: 80.2% (2024) | Class X — Velammal New Gen School, State Board: 89% (2022)

ACHIEVEMENTS & CERTIFICATIONS

- 1st Place — The Last Commit, SRM IST · ₹5,000 prize.
- Finalist — Hack The Knight, 36-hour hackathon; qualified for final round.
- Level 2 — Smart India Hackathon 2025, national-level government hackathon.
- NPTEL: Java Programming (93.7%), Object-Oriented Programming (75%), Database Management Systems (65%).
